

AUTOMATED HOT CROSS BUN SYSTEM

System supplied to RHM Belfast for M&S

Key Features

- System crosses buns on the conveyor.
- We do not need to stop the tray!
- Ensures all buns are crossed correctly.
- Fully automatic & self cleaning.
- Download a video from our website.
- www.doubledough.co.uk

We recently applied our expertise in positioning and motion control to a fully automated Hot Cross Bun Crossing System.

The system can switch between various tray types, easily compensates for variations in product size and features and automatic cleaning / purging cycle once crossing is complete.

Unlike a conventional automated bun crosser, where the trays are stopped then the buns crossed, the new C F Controls system crosses all buns whilst the tray is moving.

The C F Controls System allows a faster, more accurate throughput and optimises space.
